

## U200 Degree of balance Tester

### Product description

The intelligent balance detector is to upgrade your old product to an intelligent ion fan immediately.

The data of the ion balance of the intelligent balance detector is transmitted by wireless radio frequency, using the working frequency of 2.4G frequency band, no need to apply for the frequency point, and the reliable transmission distance (unobstructed) 30M, so that the product has the characteristics of wide distribution and not limited by the spatial distance. The recorder has a built-in alarm device (upper and lower limits are set according to the software) and can operate independently. The product has a high degree of automation, powerful functions, stable performance, strong adaptability, no manual management, and is an excellent partner for traditional ion fans.

### Product composition

The instrument is composed of a pressurizing device and an ion residue detection system. It has the ability to detect the ion blower to eliminate static electricity when it is turned on, and monitors the ion balance online in real time.

## Specification

Degree of balance Tester	U200
Detection Network Attachment	Magnetic / screw (fully compatible with all traditional IONIZING BLOWER on the market)
Alarm function	No balance ion wind alarm & balance exceeds the set standard alarm
Examination range	0~99V
Maximum power consumption	2W
Operating temperature	-5~45°C
Working humidity	<75%RH
Alarm light status	Normal green; abnormal red
Volume (mm)	80(L)x60(W)x26(H)mm
Weight (kg)	0.20kg
